

Raspberry Pi Pico W Pinout

Infineon 43439

DHT11:
GND - bread pin 27
Data - bread pin 28
VCC - bread pin 29

- Ânodo (+): Perna mais longa (positivo)
- Cátodo (-): Perna mais curta (negativo)

GND 38 -> jumper black 1 -> DHT11 GND

3V3(OUT) -> jumper red -> DHT11 VCC

GPIO -> jumper yellow -> DHT11 Data

GND 38 -> jumper black 2 -> Breadboard negative line (-)

3V3(OUT) -> jumper orange -> Breadboard positive line (+)

LED:

- Cátodo (-) -> bread line (-)
- Ânodo (+) -> bread pin 25 -> Resistor de 220 Ω -> bread pin 23 -> jumper blue -> GP9

LED RED:

- Cátodo (-) -> bread line (-)
- Ânodo (+) -> bread pin 25 -> Resistor de 220 Ω -> bread pin 28 -> jumper white -> GP13

LED Yellow:

- Cátodo (-) -> bread line (-)
- Ânodo (+) -> bread pin 25 -> Resistor de 220 Ω -> bread pin 28 -> jumper white -> GP13

Componentes Necessários

1. Raspberry Pi Pico W
2. Breadboard
3. 2 LEDs (preferencialmente de cores diferentes para distinguir as funções, por exemplo, vermelho para temperatura e amarelo para umidade)
4. 2 Resistores de 220 Ω (220 Ohms são adequados para limitar a corrente e proteger os LEDs)
5. Jumpers (Fios de Conexão)
6. Cabos USB para alimentação e programação do Pico W
